

Verteka PSF : Permanent Structural Formwork

Verteka PSF utilises a unique innovation in hybrid concrete technology;

Cementitious boards are bonded to steel reinforcement cages forming structural walls and modules.

PSF panels are manufactured off-site and arrive ready for immediate and rapid installation.

Verteka PSF eliminates labour intensive on-site steel fixing, shuttering and striking activities.

Benefits extend through the entire supply chain ;

- **Reduce overall project programme time** = Reduced cost of construction
- **Offsite manufactured** = Reduced work-at-height safety risks
- **Light weight panel** = Fewer crane lifts, Improved resource efficiency
- **Minimal propping or scaffolding** = Reduced temporary works
- **Flat board surface** = Ease of decorative finish
- **Material flexibility** = Interface with Steel frame, Concrete frame or Pods

Shear Walls; Stair Shafts; Lift Cores; Blade Columns

Concrete Frame; Steel Frame; Pod

Commercial; Residential;

Verteka scope: Design • Manufacture • Installation (by request)
